DCITRAQ (COLOTRAQ)

DCITRAQ is the industry's first cloud-based software for sourcing cloud, colocation and connectivity services anywhere in the world. Users can dynamically research, compare and purchase Data Center Infrastructure (DCI) through COLOTRAQ's unrivaled network of over 400 service providers in practically every market worldwide. This includes over 200 enterprise cloud services providers and access to more than 2,100 colocation/managed hosting facilities around the globe. The completely free cloud based software is robust and highly innovative in its design and will invariably revolutionize the way companies source colocation, managed hosting, cloud and related network services. DCITRAQ is powered by COLOTRAQ's experience specializing in data center and cloud infrastructure deployments for hundreds of enterprises since its inception in 1999.

Beyond its highly polished and user friendly exterior, DCITRAQ incorporates a customizable algorithm that matches a client's project requirements to the offerings and capabilities that vendors have specified in the system. Dynamic sorting and filtering capabilities provide you with even more control in determining from which vendors you should request quotes. A user will then be able to launch a comparison chart that will highlight the matching vendors' capabilities and offerings to further streamline and simplify the sourcing process.

Smart ITAD (IT Asset/Equipment Disposition) (SpruceIT)

Proactive approach to the management of aging IT equipment and the proper secure disposition of the equipment with certified data scrubbing, recycling and/or repurposing through a global sales channel to realize a return on your original investment.

Maximize value recovery and eliminate data & e-waste liabilities associated with decommissioned digital assets/equipment such as servers, laptops, tablets, phones, etc. through our unique application of global, market-driven, reverse logistics services (Secure ITAD Services).

The asset disposition suite of services is process-engineered to minimize logistics, audits and data destruction costs while accelerating maximum value recovery. This includes onsite and off-site NAID, DoD and NIST Compliant data eradication and/or media shredding and BAN compliant recycling services.

Our global network of computer resellers can return strong dollars on any repurposed equipment.

Protect your Brand when retiring IT Assets. Receive a Return on your Investment.
