## Tools/Products

### OPRA® SAP MAINTENANCE AND SERVICE MANAGEMENT: EFFICIENT AND USER-FRIENDLY WITH OPRA (IT-Informatik)

Is your company looking for solutions for Asset Life Cycle Management, maintenance or the service management of your machines, technical installations, vehicles or buildings? OPRA is the leading maintenance suite based on SAP for companies of any size and sector. Thanks to the full SAP integration, OPRA does not need interfaces or middleware. This way the “communication” with other SAP modules is possible. With OPRA we make SAP EAM (PM) applicable and at the same time raise the efficiency and the user acceptance, task by task and day by day.

### SAP FIORI / SAPUI5 Shaping flexible and open processes (IT-Informatik)

Looking for a custom made development in SAP with cutting edge technology? We have the experts for it. With SAPUI5 you receive a SAP toolbox for the creation of platform-independent web applications on the base of HTML5. In this case our SAP Fiori is a sample for understanding the design of web applications, as well as an aggregation of SAP standard applications that are created with SAPUI5. You can perfectly combine SAPUI5 and SAP Fiori with the products HANA Cloud Platform (HCP) and SAP HANA. Generally SAPUI5 and SAP Fiori can be expanded with any application that is useful for the business transaction.

### Readiness Check (IT-Informatik)

#### **SAP HANA DB Readiness Check**

Our SAP HANA DB Readiness Check gives you well-founded answers to all questions about a possible procedure. We analyze your existing infrastructure and check the compatibility of your SAP system landscape with the SAP HANA DB. We meticulously examine your servers, storage, networks, backup infrastructure and monitoring. Recommendations for the implementation and operation of SAP HANA DB provide you with the possible next project steps.

#### **SAP S/4 HANA Readiness Check**

SAP S/4 HANA is the latest generation of SAP Business Suite and replaces the previous SAP R/3. Based on the In-Memory Technology of the HANA database, which is the basis for the system, you will then not only have a new software but also a new database and possibly new hardware. SAP S/4 stands for Innovation and Simplification, which not only makes your business processes and their procedures more visually appealing but also simplifies them fundamentally in order to guarantee the best possible efficiency within the business areas.

### EMU – THE ERP IMPLEMENTATION MODEL FOR MID-SIZED COMPANIES (IT-Informatik)

High-performance SAP solutions are not designed only for large corporations. With SAP-EMU, we developed an ERP implementation model for mid-sized companies. A model which also meets your requirements concerning production and administrative processes as well as the internationalization of your company. SAP EMU is directly integrated in your process workflows. This way you can keep track of your project management from the order enquiry to the delivery.
